

Amitava Das

Energy Market Analyst ; Commercial Forecasting & Analytics

Phone: +44-7393081123, Email: amitava507@gmail.com, Portfolio website : <https://amitav507.github.io/>

LinkedIn: www.linkedin.com/in/amitava-das-77b411155

Currently on Graduate Visa (Valid till 4th Dec 2026), Eligible for New Entrant reduced salary floor (£36000 pa)

PROFESSIONAL PROFILE

Quantitative Data professional with experience developing statistical forecasting models, machine learning solutions and quantitative analyses to support pricing, trading and risk decisions in wholesale energy markets. Strong expertise in Python, SQL, time-series modelling and applied statistics, complemented by software engineering experience. Proven ability to translate complex datasets into robust analytical models and scalable solutions for commercial decision-makers.

CORE SKILLS

Python, SQL, Power BI, Excel, C++, Machine Learning, Statistical Analysis, Time-Series Forecasting, Predictive Modelling, Data Visualisation, Stakeholder Engagement

EDUCATION

MSc Data Science and Analytics (Distinction), University of Leeds (2024)

B.Tech Electronics & Communication Engineering (First Class Distinction), NIT Durgapur (2020)

PROFESSIONAL EXPERIENCE

Energy Trading Analyst | Drax Power Ltd, UK (Sep 2024 – May 2026)

- Developed statistical forecasting models supporting wholesale electricity pricing and trading decisions, achieving 90% accuracy on Day-ahead power price prediction.
- Analysed large-scale market, demand and renewable generation data to identify pricing drivers, market risks and revenue opportunities and position asset generation effectively over Summer 2026.
- Performed backtesting and model validation to improve forecast reliability during the Middle East crisis.
- Automated forecasting and reporting using Python, Power BI and Microsoft Copilot, improving analytical efficiency and reducing daily manual effort of 2 hours spent on reporting.
- Devised route-to-market strategy for BESS assets through exploratory analysis, feature engineering and model evaluation.

Software Developer | Qualcomm India Pvt. Ltd., Hyderabad (Jul 2020 – Aug 2023)

- Developed production software modules across 5 embedded chipset platforms using C++.
- Built reliable, high-performance software under strict quality and timing constraints.
- Strengthened software engineering and problem-solving skills now applied to scalable analytical solutions.

SELECTED PROJECTS

- Transaction Duration Modelling (MSc Dissertation): Applied Autoregressive Conditional Duration frameworks to model irregular market transactions and predict market microstructures using R libraries.
- Household Load Forecasting: Developed recurrent neural network demand forecasting models using Python and Keras.
- Financial Time-Series Forecasting: Applied ARIMA models to stock trading volumes using Python libraries.
