

Amitava Das

Energy Market Analyst ; Commercial Forecasting & Analytics;UK Graduate Visa (RTW till 4th December 2026)

Phone: +447393081123, Email: amitava507@gmail.com, Portfolio website : <https://amitav507.github.io/>

LinkedIn: www.linkedin.com/in/amitava-das-77b411155 ; Eligible for New Entrant lower Salary threshold

PROFESSIONAL PROFILE

Quantitative Data professional with experience developing statistical forecasting models, machine learning solutions and quantitative analyses to support pricing, trading and risk decisions in wholesale energy markets. Strong expertise in Python, SQL, time-series modelling and applied statistics, complemented by software engineering experience. Proven ability to translate complex datasets into robust analytical models and scalable solutions for commercial decision-makers.

CORE SKILLS

Python, SQL, Power BI, Excel, C++, Machine Learning, Statistical Analysis, Time-Series Forecasting, Predictive Modelling, Data Visualisation, Stakeholder Engagement

EDUCATION

MSc Data Science and Analytics (Distinction), University of Leeds (2024)

B.Tech Electronics & Communication Engineering (First Class Distinction), NIT Durgapur (2020)

PROFESSIONAL EXPERIENCE

Energy Trading Analyst | Drax Power Ltd, UK (Sep 2024 – May 2026) (role made redundant in a restructuring of the trading desk)

- Built and deployed statistical forecasting models for day-ahead wholesale power pricing, achieving 90% prediction accuracy and directly informing trading and hedging decisions across the GB power desk
- Delivered fundamental market analysis across demand, renewable generation, and transmission data to identify potential risks and opportunities, informing asset generation strategy through Summer 2026
- Led backtesting and model validation initiatives during recent geopolitical volatility (Middle East crisis), strengthening forecast reliability and supporting risk-adjusted trading decisions under market stress
- Automated forecasting and reporting workflows using Python, Power BI, and Microsoft Copilot, cutting daily manual reporting effort by 2 hours and improving turnaround of market insights to traders and leadership
- Designed a route-to-market strategy for BESS assets through exploratory data analysis, feature engineering, and model evaluation, supporting portfolio optimization and new revenue stream development

Software Developer | Qualcomm India Pvt. Ltd., Hyderabad (Jul 2020 – Aug 2023)

- Delivered embedded software for commercial chipset platforms deployed at scale, measured by successful integration into shipped products, by applying rigorous debugging and performance-optimization methods — building the analytical discipline later applied to quantitative market modelling.

SELECTED PROJECTS

Modelling Irregular Financial Transactions : Used ACD framework to model trade execution timings as a stochastic process, comparing several approaches on real LSE transactions.

Stock Volume Forecasting Model: Used a raw dataset of historical traded stock volumes to build an end-to-end pipeline for data loading, cleaning and comparing results across ARIMA family models.
